DETAILED ACTION

1. Claim 154 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim 154 appears to be a substantial duplicate of 152.

2. Claims 154, 156 and 152 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims are indefinite since they are dependent on canceled claim 1. Also the claims are improper multiple dependent claims since they do not depend from claims in the alternate (claim 1 or claim 145). There is no antecedent basis for many of the terms in claim 156.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1772

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 145-151, 153, 155, 157-166 are rejected under 35 U.S.C. 103(a) as being unpatentable over Osborn, III et al. (U.S. 5,647,862).

Osborn '862 teaches the use of an absorbent strip to transport liquid to places where it can penetrate a fluid directing strip (which is at least partially impermeable or resistant to liquid) and be absorbed into an absorbent layer (abstract). The absorbent strip may comprise capillary channel fibers (col. 9, lines 1-2). The instant invention claims use of a capillary system to distribute liquid and a resistance layer under the distribution layer. It would have been obvious to one of ordinary skill of the art to have selected capillary fibers from those taught by Osborn '862. It would further have been obvious to orient the fluid direction layer and perforate it at desired locations in order to direct fluid to particular locations in a given absorbent application. Regarding claim 153, capillary channel fiber bundles should have a high rate of fluid transfer per unit weight of fiber.

Art Unit: 1772

5. Claims 152, 154, and 156 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

There is no suggestion in Osborn '862 to use the particular type of fiber bundle, specified in canceled claim 1 from which claims 152 and 154 depend, in combination with the other recited limitations of claims 152 and 154.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 703-308-2420. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 703-308-4251. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.
